## Dimensions of Barge Deck for Safe Loading

### Maximum acceptable Vehicle dimensions:

- Gross Vehicle Mass: 22 tonnes
- Length: 8.5m from tailgate to front axle, or front bumper to rear-most axle
- Weight to preferably be at end of vehicle at rear of barge
- Maximum height depends on heights of bridges we may have to pass under – any vehicle heights over 2.6m should be advised prior to booking

If loading timber, bulk material bags etc, ensure individual pack weights are less than 800kg if you wish us to handle them with our Bobcat (New Holland L170 - forks available) or Excavator (Kobelco 5 tonner).
